DETAILED ACTION

This Office action is in response to the amendment filed November 12, 2003 in which 42 was added. The prior rejections of the claims are withdrawn in view of Applicant's arguments.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-4, 13-14, 16 and 38 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 3-9 of U.S.

Patent No. 6,664,216. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the present invention are generic to those and the patent. The esters that are claimed in the patent are within the scope of the broadly recited esters of the present invention. Also the physical properties recited in the patent and the present claims are the same.

3. Claims 11-12, 15, 20-37, 39 and 42 are allowable. The prior art fails to teach or suggest the claimed ester base stocks, biodegradable two-cycle engine oil

Art Unit: 1714

compositions containing the esters and a method of lubricating a two-cycle engine with the oil compositions.
